

MANDA SAI DURGA PRASAD

Java Full Stack Developer

saidurgaprasad44@gmail.com | +91 9059706133 | Hyderabad, India | www.linkedin.com/in/sdp1105

PROFESSIONAL SUMMARY

Java Full Stack Developer with 5.5 years of experience building and scaling enterprise applications. Specialized in Spring Boot microservices architecture, RESTful API design, and ReactJS frontends, with a proven track record of maintaining 99.7%+ system uptime and reducing production incidents by 35%. Experienced in end-to-end delivery — from backend data modeling with Oracle and PostgreSQL to automated CI/CD pipelines on Azure DevOps — within Agile Scrum environments. QA-rooted engineering instincts translate into lower defect rates and faster root cause analysis cycles.

TECHNICAL SKILLS

Languages: Java (8, 11, 17), JavaScript (ES6+), SQL, Core Python

Backend Frameworks: Spring Boot, Spring Web, Spring Data JPA, Servlets, JDBC

Microservices: Microservices Architecture, Service Discovery (Eureka), API Gateway, RESTful Web Services (Spring REST, Jersey)

Frontend: ReactJS (Hooks, Async APIs, State Management), HTML5, CSS3, JSP

Databases: Oracle, PostgreSQL — Joins, CRUD, Query Optimisation, Execution Plan Analysis

DevOps & Tools: Azure DevOps (CI/CD Pipelines, Repos, Boards), Git, GitHub, Maven, Ant, Apache Tomcat

Testing & Monitoring: Postman, Splunk (Log Analysis), Manual & Integration Testing

Methodologies: Agile / Scrum, ServiceNow (Incident & Change Management)

Security: JWT, OAuth 2.0, Spring Security

IDEs: Spring Tool Suite (STS), Eclipse, VS Code

PROFESSIONAL EXPERIENCE

Tata Consultancy Services Ltd. (TCS) | *Systems Engineer / Java Full Stack Developer* Feb 2022 – Present

- Engineered and shipped modular feature extensions and Change Requests (CRs) using Java 17, Spring Boot, and Microservices architecture, consistently meeting sprint delivery windows in a CPG enterprise environment.
- Architected RESTful APIs to enable secure, low-latency data transmission across downstream systems; designed payload transformation layers ensuring zero-loss cross-system integration.
- Developed hooks-based ReactJS components consuming Spring Boot APIs asynchronously, delivering responsive, data-driven interfaces across CPG enterprise modules.
- Diagnosed and resolved critical production bottlenecks via Splunk log analysis and Oracle SQL tracing; refactored legacy endpoints to improve throughput and drive a 35% reduction in recurring P1 production tickets.
- Designed and optimised data layers using Spring Data JPA — implementing complex entity relationships, resolving N+1 query issues, and executing multi-table Oracle SQL joins for production debugging.
- Configured and maintained Azure DevOps CI/CD pipelines to automate build, test, and deployment workflows — eliminating manual release errors and accelerating delivery cycles.
- Sustained 99.7%+ system uptime across CPG enterprise modules by systematically resolving structural data inconsistencies and performing proactive root cause analysis (RCA).
- Drove code reviews and technical debt reduction across Agile sprints, ensuring all feature deliveries aligned with architectural standards and acceptance criteria.

Infosys | *Testing Executive / QA Engineer*

Jul 2018 – Oct 2019

- Validated functional and end-to-end integration test scenarios across business-critical applications, identifying defects pre-production and safeguarding release quality.
- Converted complex business requirements into structured test scenarios and tracked defect lifecycle end-to-end using Agile test management tools.
- Built strong diagnostic instincts through hands-on exposure to data flows, exception handling, and application behaviour — directly informing backend debugging and API design in subsequent engineering roles.

KEY ACHIEVEMENTS

- Sustained 99.7%+ uptime across CPG enterprise modules by systematically resolving structural data inconsistencies — driving a 35% reduction in recurring production tickets.
- Delivered multiple feature extensions ahead of schedule with full stability validation across staging environments, reducing last-minute production rollbacks.
- Recognised with the Quick Learner Award (TCS) for mastering complex enterprise frameworks and delivering backend fixes within the first onboarding sprint.

TECHNICAL PROJECTS

Java & Enterprise Architecture Knowledge Base | github.com/saidurgaprasad44/Java-Full-Stack

- Compiled a structured repository detailing Microservices design pattern, Spring Boot configurations, and RESTful API integrations.
- Documented proof-of-concept implementations for Service Discovery (Eureka) and API Gateway patterns with architectural deep-dives.

EDUCATION

Master of Computer Applications (MCA)

Sri YN College, Adikavi Nannaya University — Narsapur, AP, India

Oct 2019 – Oct 2021
